

INDUSTRY'S FIRST CLOUD TOLL-FREE SOLUTION

Smart Toll-Free Voice

Maximize Savings, Ensure Call Quality, Redundancy

Finally: a toll-free intelligent call routing engine

Commio has created the first cloud-based service designed for carriers, call centers, and large enterprises to continuously control and optimize Smart Toll-Free calls over every major Tier 1 carrier. The Smart Toll-Free analytics engine perpetually analyzes traffic patterns and applies those patterns to available routes and costs, optimizing traffic for superior audio and maximum savings on a call-by-call basis.

How much control do you want?

All of the control is extended to our customers. In real time, you can:

- Choose vendors
- Select single numbers or similarly grouped numbers
- Determine geographical limitations
- Access infrastructure and tools
- Make routing changes

Discover the difference

Relying on a single provider (and possibly the wrong one) for your origination needs can lead to poor call quality and dropped calls.

Don't get stuck with limited options and leave your customers without a way to reach you. Take back control and give them the quality they deserve with:

- Crisp and clear audio
- Better call completion
- Redundancy and continuity
- Total operational control
- Cost containment and savings

There's a better way: Commio's Smart Toll-Free

The Commio cloud-based Origination platform offers total control throughout the origination process and makes it easy to meet independent carrier and VoIP provider requirements.

First-of-its-kind features

Get more value and control with cloud-based Smart Toll-Free origination and Intelligent Call Routing from Commio
